PRODUCT DESCRIPTION

Membrane free, flexible fibre reinforced waterproofing paint for walls, roofs and parapets

PRODUCT USES

Ideal for waterproofing of correctly prepared and primed:

- Parapets and tops of freestanding walls.
- Nail heads.
- Cracked tiles and fibre cement roofs.
- Cement or concrete walls.
- Roof features.
- Flower pots.

FEATURES AND BENEFITS

- One step membrane free application.
- Fibre reinforced bridges cracks of up to 2.0mm without the need for a waterproofing membrane.
- Water & UV resistant.
- Flexible and crack resistant.
- Long lasting acrylic formulation.
- Can be top coated with most water based paints.
- Ready for use.

PRODUCT INFORMATION

Appearance Low Sheen

ColourWhite and Light GreyBinder TypeAcrylic Co-polymer

Density at 23°C Approx. 1.40

Solids Content By weight: Approx. 66 %

By volume: Approx. 52%

Packaged Viscosity Viscosity at 23°C: Approx. 100kU pp

PRODUCT INFORMATION

	Waterproofing; Horizontal surfaces (Brush)	Weatherproofing; Vertical wall surfaces (Medium Pile Roller)
Spreading Rate	2 m ² - 3 m ² p/l per coat 3 m ² - 4 m ² p/l per coat Approx. per litre depending on surface porosity, profile and application method	
Recommended DFT per coat	Min. 200 μm. Max. 300 μm	Min. 150 μm. Max. 200 μm
Recommended WFT per coat	Min. 350 μm. Max. 500 μm	Min. 250 μm. Max. 330 μm
Coat Requirements	3 coats. Depending on application will more coats be required to achieve a minimum total DFT of 600 µm.	2 coats. Depending on application will more coats be required to achieve a minimum total DFT of 300 µm.

Flash Point Non-Flammable

APPLICATION INFORMATION

Mixing	Stir with a flat paddle until homogeneous.	
Application conditions	Surface Temperature between 10 - 35°C Relative Humidity between 10 - 85 % OR 2°C above dew point minimum.	
Application methods	Brush or roller. Roller mainly recommended for large flat wall surfaces.	
Thinner	Thinning not recommended. Ready for use after thorough stirring.	
Drying Time	Touch dry 2 hours at 23°C.	
Recoating Time	4 hours at 23°C. Maximum 3 weeks if not left as a topcoat. (Drying times will be extended during cold, wet or humid conditions)	
Cleaning of equipment	After use, remove as much product as possible, and then clean immediately with water.	
Substrates	Suitable for cement plaster, concrete, fibre cement, PVC, galvanised iron and all non-ferrous metals, and wooden surfaces provided that appropriate preparation and priming is carried out.	
Precautions:	Do not apply during cold (below 10°C) or wet weather. Not suitable as a primer for metal surfaces. Not suitable for direct application to powdery or friable surfaces whether previously painted or not.	

APPLICATION INFORMATION

Precautions continue:

Not suitable for embedding waterproofing membrane except

for the repair of large, structural cracks.

The fibres in **Dulux Rainshield** will create a slightly rippled

finish.

Product is prone to dirt pick-up when left as a topcoat

Not a submersible waterproofing coating.

Coats Required For waterproofing flat, horizontal surfaces apply a minimum

of 3 coats **Dulux Rainshield** to achieve a minimum continuous total dry film thickness of 600µm microns. The waterproofing system should be applied to the whole length of the area that is to be waterproofed. Apply up, over, and down wall tops/copings, and extend at least 25mm down the sides. To prevent capillary action (water cohesion) the waterproofing system must be worked well into the

substrate.

For vertical wall surfaces, apply a minimum of 2 coats **Dulux Rainshield** to achieve a minimum continuous total dry film thickness of 300µm microns, and to achieve the required

crack-bridging and weatherproofing properties.

Top Coating Can be over-coated with most premium acrylic based Dulux

decorative finishes.

SURFACE PREPARATION

Plaster sand should comply with SABS 1090 requirements. Plaster mix must be applied at a minimum thickness of 10mm, curing to a hard and sound finish, free of soft and friable material. MPA strength must comply with SABS 0164-1 (10MPA=2, 6:1 and 5MPA=4:1).

Ensure that surfaces are sound and free from dust, oil, grease, dirt, and debris. Surfaces must be thoroughly dry - no more than 12% moisture content.

NEW SURFACES

Cement Plaster Parapets, Wall Tops, Copings and Fibre Cement Roofs

- Fresh cement plaster should be allowed one week drying for every 5mm thickness; and longer in cold or damp weather.
- Prime with one coat Dulux Plaster Primer or Dulux Trade Plaster Primer or Dulux
 Trade Alkali Resistant Primer. For very absorbent surfaces more than one coat primer
 may be required to achieve correct binding and sealing properties.

SURFACE PREPARATION

NEW SURFACES

Concrete

- Remove any uncured cement, grease, and mould-release agents by high-pressure
 water blast, or wash with a strong **Dulux Pre-Paint Sugar Soap** /water solution. Rinse
 off thoroughly with clean water and allow drying.
- Prime with one coat Dulux Plaster Primer or Dulux Trade Plaster Primer or Dulux
 Trade Alkali Resistant Primer. For very absorbent surfaces more than one coat primer
 may be required to achieve correct binding and sealing properties.

Galvanised Iron, Aluminium, and all non-ferrous metals

- Remove all traces of temporary protective coating, dirt and grease from the surface with
 Dulux Galvanised Iron Cleaner. Ensure complete removal of Dulux Galvanised Iron
 Cleaner by rinsing with running water. A water-break free surface indicates thorough
 cleaning running water should not form droplets. If a water-break free surface was not
 achieved, repeat the cleaning process.
- Prime immediately after cleaning with two coats Dulux Rustshield or with one to two coats Dulux Galvanised Iron Primer or Dulux Trade Corrocote 1 Metal Etch Primer, depending on the severity of the conditions. Two coats recommended for coastal conditions.

PREVIOUSLY PAINTED SURFACES

Sound acrylic coatings, not powdery

Wash down with water, allow drying and apply directly.

Sound enamel coatings

Sand surfaces to a matt finish to aid adhesion remove sanding dust and apply

Old Paint in Poor Condition

- Completely remove all loose and flaking paint by most appropriate means, e.g. scraping, coarse sanding, or stripping with a paint stripper.
- Remove oil, grease dirt or any other contaminants with Dulux Pre-Paint Sugar Soap/water solution. Rinse with clear water and allow drying.
- Friable surfaces must be removed and repaired.
- Chalked surfaces must be thoroughly brushed or prepared with high pressure water
 cleaning. NOTE: While this product can be used for sealing exterior chalked or friable
 surfaces, it will not penetrate thick layers of powdery material. Dulux Bonding Liquid or
 Dulux Trade Bonding Liquid which is un-pigmented is preferred as it has the ability to
 penetrate further into the surface but need to be over coated within 48 hours.

SURFACE PREPARATION

PREVIOUSLY PAINTED SURFACES

Old Paint in Poor Condition – (Continued)

- Mould instructions. To kill lichen and algae growth, scrub with one of the following solutions: either 4:1 water/chlorine, or 4:1 water/sodium hypochlorite. Ensure that the areas are completely saturated, and allow the solution to react for a minimum of 4 hours. Rinse the complete wall surface thoroughly with clean water and allow drying.
- Prime all exposed areas with appropriate primer as recommended under new surfaces.
 For very absorbent surfaces more than one coat primer may be required to achieve correct binding and sealing properties.

Powdery/chalky

- Brush down thoroughly or wash with high pressure water.
- **Dulux Bonding Liquid** or **Dulux Trade Bonding Liquid**. Apply **Dulux Rainshield** within 48 hours.

CRACKED SURFACES

Hair cracks up to -0.2mm may just be sanded lightly.

- · Remove dust and debris.
- Brush Dulux Rainshield well into the cracks with an old small brush to fill and bridge the cracks.

Medium plaster cracks between +0.2mm and -2mm are to be raked out with a scraper blade.

- Remove dust and debris.
- Treat mould growth as specified above.
- · Rinse thoroughly with water and allow drying.
- Brush a generous coat of **Dulux Rainshield** into and over the cracks. Ensure that the cracks are filled with **Dulux Rainshield** and allow to dry.
- Repeat until the cracks are completely filled.

Cracks larger than 2.0mm, where a waterproofing membrane is required.

Prepare and prime the surface as specified under "Surface Preparation".

- Apply a generous layer of Dulux Rainshield.
- Cut membrane to size and lay onto the paint whilst still wet. Press in to the Dulux
 Rainshield with a brush to remove any air pockets and to saturate the membrane with
 the Dulux Rainshield. Once dry, apply two further coats of Dulux Rainshield to seal
 off.

FILLING

Fill all imperfections with the appropriate **Dulux Pre-Paint filler** and spot prime filled areas with **Dulux Plaster Primer** or **Dulux Trade Alkali Resistant Primer** once the crack filler has dried properly. Failure to do this will result in uneven sheen levels between the repaired and normal areas.

HEALTH AND SAFETY INFORMATION

This product contains no added lead. Avoid contact with skin or eyes. Keep out of reach of children. If accidently swallowed, seek medical advice immediately and show this container to the doctor. Dry sanding, flame cutting and/or welding of the dry paint film will give rise to dust and/or hazardous fumes. Wet sanding should be used wherever possible

If exposure cannot be avoided by the provision of local exhaust ventilation, suitable respiratory protective equipment should be used. Do not empty into drains or watercourses. Ensure good ventilation during application and drying. It is recommended to use suitable protective clothing and equipment.

Do not apply to roofs that act as catchments for drinking water.

To avoid the risk of spillage, always store and transport containers in a secure upright position. Refer to Material Safety Data Sheet for complete information.

ADDITIONAL INFORMATION

Packaging 5lt, 20Lt

Storage Conditions Store under cool dry conditions away from direct sunlight,

heat and extreme cold.
